PERC Restriction Guidelines, Health Technologies Programs

These guidelines exist to assist health technologies program advisors make decisions about when to extend a registration restriction in PERC. These are guidelines, not rules. Advisors may impose additional standards if the advisor deems a further restriction is in the best interest of the student’s chances of persistence or success.

1) Students placed into developmental education courses will be advised each semester. For example, if a student is currently taking RED 080, the student's PERC restriction will be set one semester at a time, requiring the student to see an advisor each semester until all development education courses are complete.

2) Students who have completed all developmental education courses but who cannot yet begin the core courses for a health program may be advised and may register for courses for multiple semesters up to the point of registering for the core portion of the program. For example, if a student has two semesters until the he or she will register for core courses, that student's PERC may be set to allow two semesters of independence.

3) After the student has been advised and has registered for the first semester of the program (core) courses, the student may continue to self-advice and register for courses until the anticipated graduation date. For example, if a student is taking pharmacy classes, the student's PERC restriction will be set to allow independent advising and registration until the semester following the anticipated graduation date.

4) If a student withdraws or fails a semester while enrolled in the core portion of a health tech program, the student's PERC restriction will be re-set to require that student to meet with an advisor prior to re-enrollment. This is an important safeguard regardless of whether the student re-enrolls in the same program, or changes programs.
